

CONTRACT RESEARCH

BIOMEDICAL

A Customized Approach

SoBran contract research services and our design-built laboratory can meet your specific small-animal preclinical toxicology and drug discovery program needs. We work with each of our clients to ensure that their research efforts are conducted in the most professional and effective manner and maintain the highest levels of quality assurance.

We support an expanding range of Good Laboratory Practice (GLP) and non-GLP compliant in vivo research requirements. Scientific and technical professionals assemble customized approaches to your research requirements, combining SoBran expertise with specialized services from a network of world-class affiliates.

Leading-Edge Services

Our state-of-the-art laboratory and animal facility located in the Science and Technology Park at Johns Hopkins in Baltimore, MD incorporates high-quality housing and the latest animal care technology to reduce uncertainty in your data.

CONSISTENCY

Our leading-edge facility provides:

- Exclusive use of ventilated micro-isolator caging supporting ABSL I and II environments
- Automated environmental monitoring and reporting
- Web-based protocol development and administration, ensuring timely review and implementation
- Experienced protocol management and veterinary clinical care
- Regulatory assurances – National Institutes of Health (NIH)/Office of Laboratory Animal Welfare (OLAW)

Our comprehensive suite of preclinical study services includes: analytics, toxicology, pharmacokinetics, animal model development, automated animal behavior studies, breeding and colony management.

Our proven biomedical support expertise is enhanced by:

- Program management certified to ISO 9001:2008 standard
- Effective communications and transparent operations driven by a robust quality management system
- Over 500 professionals experienced in all aspects of *in vivo* research

Responsive to Your Needs

SoBran is the partner government agencies, academic institutions and industry count on to help address today's most difficult biomedical research challenges.

SoBran's facilities can house a broad range of projects supporting:

- Vaccine development
- Drug discovery
- Product safety testing
- Animal disease diagnostic services
- Cancer diagnostic and treatment testing
- Personalized medicine

As the industry leader in designing professional animal care programs, managing animal facilities and providing high quality technical support for laboratory animal research projects, SoBran offers a range of Biomedical Research Support services.

Let us show you how our continued commitment to quality, efficiency and customer service can help you realize your goals.
